

ALPHA[®] TRUEHEIGHT[®] SPACER

Tape & Reel Packaging / Spacer with Solderable Surface

DESCRIPTION

ALPHA TrueHeight Spacers are non-collapse copper discs coated with a barrier layer of nickel and finish coated with gold for optimal solderability. **ALPHA TrueHeight Spacers** are designed to be automatically pick-and-placed and reflowed onto a printed circuit board pad printed with a precise amount of solder paste. Since all sides of the spacer are coated, reflow does not result in exposed copper.

After reflow, the **ALPHA TrueHeight Spacer** provides a precise and repeatable standoff height. Electronic components that are reflow soldered can benefit from the use of **ALPHA TrueHeight Spacers** to improve soldering results, such as to prevent corner signal shorting on large BGA devices with non-characteristic warping. They are also effective at preventing component tilt and providing a fixed solder bond line under components such as large-area LGAs and power packs.

READ ENTIRE TECHNICAL DATA SHEET BEFORE USING THIS PRODUCT

FEATURES & BENEFITS

Features

- Excellent height dimensional tolerance – as low as $\pm 0.010\text{mm}$
- Non-collapse spacer function
- Nickel/Gold coated copper disc
- Fast placement utilizing standard pick and place equipment
- 7 inch standard IEC reels available

Benefits

- Advanced Spacer thickness tolerance controls provide repeatable results
- Nickel/Gold plating ensures no exposed copper after reflow
- Tape and reel packaging for easy integration into standard assembly processes
- Excellent pick and place performance

PRODUCT INFORMATION

Part Dimensions

Size	a		b

Tolerance on the part dimension 'a': $\pm 0.05\text{mm}$

Tolerances on the part dimensions 'b': $0.10 \pm 0.010\text{mm}$; $0.25 \pm 0.013\text{mm}$; $0.30 \pm 0.015\text{mm}$; $0.34 \pm 0.017\text{mm}$; $0.38 \pm 0.020\text{mm}$

Contact your local sales representative for the orderable item number for this part type.

APPLICATION GUIDELINES

ALPHA TrueHeight Spacers are used to maintain a fixed height off the printed circuit board for electronic components. For components such as Ball Grid Array packages, excessive warping during reflow soldering can result in the corner signals shorting against each other as the "frowning" component corners come in near direct contact with the PCB. By adding spacers on the corners of the device, a minimum height is maintained, preventing signal shorting.

In applications such as reflow soldering of through hole components, adequate clearance between component body and PCB must be maintained to ensure clearance for solder paste print or preforms placed into the paste to add solder volume. If a through hole component does not have adequate clearance off the PCB, ALPHA TrueHeight Spacers can be added to the PCB to enable reflow soldering. This will reduce processing costs (eliminate wave soldering) and improve performance (increase hole fill).

TECHNICAL DATA

Alloy Information

All ALPHA TrueHeight Spacers are constructed of copper with nickel/gold finish.

RECYCLING SERVICES

We provide safe and efficient recycling services to help companies meet their environmental and legislative requirements and at the same time, maximize the value of their waste streams.

Our service collects solder dross, solder scrap, and various forms of solder paste waste. Please contact your local sales representative for recycling capabilities in your area.

SAFETY & WARNING

It is recommended that the company/operator read and review the Safety Data Sheets for the appropriate health and safety warnings before use. **Safety Data Sheets are available.**

STORAGE

The parts are packaged in ESD safe reels.
